Fluent usability

Since 1901

"In addition to the exquisite quality of work, we have taken the utmost interest in the functionality of the equipment. In this regard, several doctors committed to the cause have contributed their advice, based on their valuable experience."

Juho Merivaara in 1926, founder of Merivaara

In a modern operating room from the 1950s tables and lights were manually adjusted.

We are proud that the company's values 120 years ago were so ahead of their time that they can still today be fully applied when designing new innovative solutions for healthcare professionals. This is demonstrated by our latest award-winning products, the Q-Flow surgical light and the Smarter Practico operating table with functionality and ease of use at the heart of the design. Our user interfaces are developed together with hospital staff so that all our products and systems can be used intuitively.

We call this Fluent Usability; operating room staff can focus on patient care, not for the management of complex technologies. Top surgeons appreciate this all over the world.
